

## X-Net Mission Statement 2024

The Partners' aims are for a long-term sustainable and profitable business operating as a conduit providing digital and data opportunities to a diverse twenty-first century workforce and enabling local lifestyle opportunities.

The business is centered around continuing the development of our capabilities with security by design in mind: physical; technology; process; information; and people, that enable our customers to accelerate the delivery of the capability that meets their needs.

We know that the technical and customer expertise of the X-Net team is the key to establishing and sustaining long term commercial relationships; where customers not only experience the critical value they receive but importantly make the decision to continue their contracted services easily and problem-free.

We will capitalise on our learnings from delivering 5G test infrastructure, BattleLab capability and our multi faceted engineering development capabilities to create our offering to accelerate the adoption of emerging technologies.

We understand that the success of our business depends on realising the potential of all members of our organisation and therefore we will equip people with the skills and technology that enables them to reach that potential. We commit to encourage equality, diversity and inclusion in our work force and to make it our mission to ensure each employee feels valued and appreciated in their job.

Our environmental efforts in previous years have been concentrated on advocating employee involvement in all environmental matters, minimising waste to lowest possible level, promoting the use of renewal and recyclable materials and investing in equipment that helps maintain a low carbon footprint. All these activities help to manage our carbon footprint and a goal for the upcoming year is to create a Carbon Reduction Plan that is aligned with the Government's Net Zero by 2030 Agenda.

We want to be recognised in terms of our credentials, achievements and values to compete with the larger suppliers, and accessible enough so that big suppliers simply can't compete.

We know first-hand how important it is to have a solid business base aligned to our social values. It is our ambition to continue to reuse our experience and apply them to new opportunities in order to continue to provide new technologies and interesting challenges for our workforce.
